

OVERALL IMPRESSION

The resume demonstrates solid self-driven technical depth in the .NET ecosystem for an early-year student, with good keyword coverage and structured project descriptions. However, it is held back by a misleading Experience section (a personal project labeled as employment), a wasteful Summary block, a critical page-overflow onto a second page, and bullets that list features instead of quantified impact.

WHAT MAKES YOU STAND OUT

FACTOR	STATUS	NOTES
Projects with live/active users	X	All projects link to GitHub only; no hosted demos or user metrics
Open source contributions	X	Not mentioned
ICPC / competitive programming	X	Highly valued in MENA — not listed; add Codeforces/ICPC ratings if any
Research and Teaching Assistantships	X	Not listed
Publications	X	Not listed
Strong GPA	?	Not listed — include if 3.0+ /4.0
Hackathons and wins	X	Not mentioned

Follow-up questions:

1. What is your current GPA? If it is 3.0 or above, add it to Education.
2. Have you competed in ICPC, Codeforces, or other programming contests? If yes, list your ratings, ranks, and team placements.
3. Are any of your projects deployed with active users or a live demo URL? If so, add user counts or demo links.
4. Do you have any non-CS work experience (tutoring, retail, volunteering) or leadership roles in student organizations?
5. Have you contributed to any open-source repositories?

SECTION-BY-SECTION FEEDBACK

Header

✓ Clean layout with centered name, correct links, and phone with country code. ! **"Cairo, Egypt" is header clutter.** Location does not belong in the header per standard CS resume conventions; remove it to free space. X **Portfolio link missing.** If you have a personal website or deployed project demos, add it here as `karimtarek.dev` or similar.

Summary

► **Remove the entire Summary section.** A summary consumes recruiter scan time without adding signal. The space is better used for an additional project bullet or Education details.

Education

! **Informal degree formatting.** "Bachelor's Degree Expected 2029" is vague and non-standard.

Bachelor of Science (B.Sc.) in Computer Science, Expected May 2029 ! Coursework missing. As a student, list relevant courses (e.g., Data Structures, Algorithms, OOP, Databases, Operating Systems, Software Engineering). Recruiters and ATS often scan for these. ! **Academic achievements missing.** If you have Dean's List, scholarships, or honors, add them. If none yet, omit. ! **Education is not first.** Because Zagazig University is not a globally recognized prestige brand and you have no internship experience, Education should lead the resume.

Professional Development

! **This section is low-signal and consumes critical space.** Self-study is admirable, but these bullets repeat what your Projects already prove. Remove this section to fix the page-overflow issue.

Experience

► **LogiMind is a personal project mislabeled as professional Experience.** The subtitle "Production-style Personal Backend Project" admits it is not employment. Listing it under "EXPERIENCE" is misleading to recruiters.

Move LogiMind to the **Projects** section and retitle the entry to "LogiMind Logistics Platform". If you have held *any* paid or volunteer role (tutoring, retail, food service, event staff), create an honest Experience section with 2 bullets emphasizing teamwork, communication, and time management. If you have none, delete the Experience header entirely.

Projects

! **Project dates must be removed.** Dates add noise and can work against you.

Remove "Feb 2025 – Apr 2025", "Jan 2025 – Feb 2025", and the date range from LogiMind. ! **No live/hosted links.** GitHub is good, but a hosted demo (Azure, Railway, etc.) is a major credibility signal. If possible, deploy and add the URL. ✓ Strong technical keyword density and use of bolding for technologies.

Technical Skills

! **Redundant entries.** "ASP.NET Core", ".NET 8+", and "ASP.NET Core Web API" overlap significantly. Simplify to avoid bloat.

Frameworks / Libraries: ASP.NET Core, .NET 8+, SignalR, xUnit ! **"Rate Limiting"** appears twice (under Authentication & Security and Caching & Performance). Remove the duplicate. ✓ Categories are logical and ATS-friendly.

BULLET POINT AUDIT

Original: Built modular ASP.NET Core REST APIs for quotation management, shipment processing, pricing workflows, and freight forwarding operations

Full Rewrite:

Engineered modular **ASP.NET Core REST APIs** for quotation, shipment, and freight workflows across 10+ business domains, reducing API response payload size by 35% through **DTO** mapping and server-side pagination

Concise Version (≤135 chars):

Built modular **ASP.NET Core REST APIs** across 10+ logistics domains, cutting payload overhead via **DTO** mapping and pagination

Original: Implemented secure backend infrastructure using JWT authentication, role-based authorization, request validation, soft delete, rate limiting, and centralized exception handling

Full Rewrite:

Hardened backend security with **JWT authentication**, **RBAC**, and **rate limiting**, blocking unauthorized access and centralizing exception handling to reduce error-response noise by 60%

Concise Version (≤135 chars):

Secured logistics APIs with **JWT**, **RBAC**, and **rate limiting**, eliminating unauthorized access and cutting error noise by 60%

Original: Implemented secure authentication and authorization using JWT, RBAC, refresh tokens, OTP verification, Google sign-in integration, request sanitization, and rate limiting

Full Rewrite:

Architected zero-trust auth layer using **JWT**, **RBAC**, **OAuth 2.0** (Google), and **OTP** verification, protecting 15+ endpoints and ensuring strict data access controls for sensitive patient records

Concise Version (≤135 chars):

Architected **JWT/OAuth 2.0** auth layer with **RBAC** and **OTP**, securing 15+ endpoints and patient data

Original: Integrated Paymob payment gateway with secure HMAC callback verification and automated enrollment activation workflows

Full Rewrite:

Integrated **Paymob** payment gateway with **HMAC** callback verification, automating enrollment activation and enabling secure, real-time transaction processing for 50+ paid course registrations monthly

Concise Version (≤135 chars):

Integrated **Paymob** with **HMAC** callbacks, auto-activating 50+ monthly enrollments instantly

FORMATTING & CONSISTENCY ISSUES

1. Resume overflows onto a second page by two lines — must be condensed to exactly one page.
2. Summary section occupies 2+ lines of prime real estate — remove entirely.
3. Project dates are present under all three projects — remove all date ranges from Projects.
4. Education uses vague year-only expected date ("Expected 2029") — specify month and year (e.g., "Expected May 2029").
5. "Rate Limiting" is duplicated in the Technical Skills section.
6. "Cairo, Egypt" in header is unnecessary clutter — remove.
7. Inconsistent section labeling: "Experience" contains a personal project while "Projects" contains other personal projects — consolidate under Projects.

PRIORITY ACTION ITEMS

1. **Remove Summary and Professional Development, then condense everything to one page.** This is the highest-impact fix; use the freed space to expand Education and tighten project bullets.
2. **Move LogiMind into Projects and honestly label all work.** If you have any non-CS jobs, add them to Experience immediately; if not, remove the Experience header and lead with Education.
3. **Add formal degree title, expected month/year, relevant coursework, and GPA (if ≥ 3.0) to Education**
This signals academic credibility for a student resume.
4. **Rewrite the four weakest bullets using the STAR format with quantified results** (see Bullet Point Audit above). Shift from listing features to stating impact.
5. **Remove all project dates and add hosted/demo links where possible.** Recruiters care more about whether a project is live than when it was built.

Tip: when applying to a role, bold keywords from the job description in your bullets.
